

Wood Veneer

unfolded and sliced

GLOBALDIS
FOR YOU, TODAY

GRUPO VICAIMA

Wood veneer

100% natural

Wood veneer is a 100% natural product which enables saving costs (through its application on other wood based panels), obtaining the same aesthetic effect of solid wood, without having to recur to deforestation to obtain it, because the trunks chosen for the leaves are selected according to a high standard criteria of diameter and quality, therefore, the choice is more dimmer.

Natural veneer is mostly extracted form the first trunk cut (part of the tree closer to the root and up until the first branches), mostly after being boiled, through unfolding or slicing (figured, listed or rift).

We can obtain selected veneer (pre-composed) through natural wood which after being unfold is dyed and laminated.

The specifications are given by the quality and length (door or panel).

GLOBALDIS commercialize a wide range of noble essences, from the lightest to the darkest, delivering the veneers in stock until 72 working hours.
