GRUPO VICAIMA

Impregnated Wood

poles and watching towers
waiting towers

Nordic Pine Poles are previously dried, mechanically lathed, sharpened in one end and treated by impregnation in a double vacuum chamber, colour green, class 4, in contact with the ground, according to standard EN 351 for penetration.

They are used for fences, agriculture (vineyards, orchards) lampposts and protecting metal fences in highways.

GLOBALDIS commercializes poles with lengths from 1500 and 2500 mm, with 40 to 100mm diameter. It is possible to supply other sizes, under request.

Watching towers as well as waiting towers are fir poles treated and lathed in green.

Poles have 100 mm diameter and the platform is 2 meters high.

The towers are sold in a kit with instruction manual, thus the assembly service can be done under request.

Poles and towers in stock can be delivered until 72 working hours.
